

**IN THE UNITED STATES PATENT AND TRADEMARK OFFICE
PATENT APPLICATION**

Appl. No.: 10/708,556
Applicant: Amit Goyal
Filed: March 11, 2004
TC/AU: 2615
Examiner: Ping Lee
Docket: TI-36313
Cust. No.: 23494

Confirmation No.: 2555

RESPONSE TO ELECTION/RESTRICTION REQUIREMENT

October 15, 2007

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

In response to the election/restriction requirement mailed September 14, 2007, Applicant elects **Species 1 (Claims 1 – 39; FIG. 7)** for examination purposes, with traverse.

The Specification describes the differences between Species 1 of FIG. 7 and Species 2 of FIG. 13 in paragraph [0160], as follows:

"Detector circuit 130 of Figure 13 does not contain round bias driver since ground terminal of speakers in cap interface 500 is connected to ground. Thus, switch similar to switch 790-3 of Figure 7, which connects to Vss/ground is not required in Figure 13. Detector circuit of Figure 13 may also be operated to detect insertion of headset, type of headset, removal of headset and button press in headset."

Both species include a "ground terminal," and no claim includes recitations specific to the differences outlined in paragraph [0160]. Claims 1 – 39 are readable on both Species 1 and 2.

Respectfully submitted,

/Warren L. Franz/
